A shaft which opened up at Dunsden Green Farm was examined by Brian Durham of the OAU. The depth was about 9m and the steep ramp at the base led to two 5m high chambers cut into the chalk with flint nodules. It appeared that the galleries were dug for chalk rather than flint, possibly for marling

Description and Sources

Description

(1) Features found in trenching include pits and ditches, yielding datable artefacts from late Neolithic to the I/A. Features were cut into a complex sequence of alluvial clay up to 1.6m deep that were the infilling remnants of a braided paleo channel system. Site is significant because of Neolithic-I/A material, rare within the Middle Thames

(2) 5 archaeological features recovered: 1 ditch of unknown date, 1 post medieval ditch, 2 ?prehistoric pits and deposit of "cobbled surface" flint pebbles of unknown date and function; unstratified finds include a moderate amount of prehistoric worked flint and sherds of LBA/EIA and Roman pottery. The cumulative results suggest sporadic and intermittent prehistoric and Roman activity on the floodplain, with the more permanent occupation on the gravel terraces above
